

Ardent Mills Safeguard™ Treatment System

An integrated flour and alternative grain food safety solution

Protect

your brand reputation

From manufacturers to consumers, the pathogen-related risk of eating raw flour in cookie dough or cake batter is commonly misunderstood.

Did you know flour can be at risk for exposure to naturally occurring biological hazards, including *E. coli*, *Salmonella* and *Listeria monocytogenes*? To help eliminate these risks, many flour-based products require additional cooking steps for consumers to perform, frequently instructed on the packaging. You need to protect your brand with a proactive solution that can help you mitigate the risk of costly recalls.

74% of consumers at least sometimes taste the batter directly from a mixing bowl, spoon or beater¹

53% of consumers sample refrigerated/ frozen cookie dough prior to baking¹

Our solution

To help keep your customers safe from pathogen related food safety risks, **Ardent Mills Safeguard™** treatment has up to a five-log validated pathogen reduction process that creates a safe heat treated flour that can be used for ready-to-eat applications. Our advanced heat treatment technology has a decade-long legacy as a successful, commercially sold product line, available for both traditional wheat-based and alternative grain, flour, pulses, seeds and flakes.

Our products with Ardent Mills Safeguard treatment system

Wheat flour

Benefits

- ◆ Integrated supplier solution that can help extend flour safety from our facilities to yours
- ◆ Treated flour maintains baking quality across numerous applications

Alternative grains

Benefits

- ◆ We heat treat grains, flour, flakes and blends and help extend flour safety from our facilities to yours
- ◆ May help reduce earthy or nutty taste in certain alternative grains

Our wheat flour process

1

Pristine mills

Wheat is milled into flour in our pristine, BRC-certified facilities.

2

Processing

Flour is milled and stored, then undergoes our proprietary heat treatment. The treated flour goes through a series of validated, precise controls that deliver up to a five-log reduction.

3

Delivery

Validated flour is delivered directly to your facility through our tightly managed process to maintain ingredient integrity and safety.
